

### Product Description

Is an acid cleaner to be used to remove cementitious residue from concrete and masonry surfaces. ETCHCRETE is ideal for the cleaning of exposed aggregate surfaces before applying surface sealers.

### Application

ETCHCRETE can be diluted up to a maximum ratio of 1 part acid to 3 parts water. Concentration required depends on the extent of cleaning to be done. Apply material to the working surface at a rate of 200-300 sq.ft. per gallon. Allow it to react for about five minutes. Brushing the surface will aid the cleaning process. Once the surface is clean, it should be rinsed thoroughly to remove the remaining acid.

### Caution

Danger, ETCHCRETE can cause severe eye and skin irritation or burns. Harmful if swallowed or inhaled. Read cautionary information on adjacent panel. Protect plants and animals from exposure.

### Warranty

This high quality cleaner will perform as stated when applied according to the directions. Liability for damages or for defective goods shall be limited to refund of the purchase price or replacement.
