

Product Description

Ceramica Heavy Duty Spray Degreaser has been formulated with select surfactants and chelates to effectively break down and remove cooking fats and other oily and greasy materials.

Uses

Ceramica Heavy Duty Spray Degreaser is recommended for use as a degreaser to remove grease and oil stains from tile, stone, metal and other commonly found surfaces.

Application Instructions

Liberally spray the degreaser on the soiled areas, let it sit for 3 to 5 minutes, then wipe the sprayed area with a damp cloth or sponge. Rinse the cleaned area with hot water, then dry the surface with a paper or cloth towel. Ceramica Heavy Duty Spray Degreaser formulation will not harm natural stone. Thorough rinsing is necessary to remove the loosened materials that the degreaser has dissolved. Improper rinsing can leave a soapy or greasy film that can be very slippery as well as leaving a poorly cleaned surface.

Limitations

Not for use on aluminum surfaces.

Heavily soiled areas may require more than one application and extra scrubbing.

Note: extremely dirty grout is usually the result of it not being sealed properly. To correct this problem we recommend that at least half the grout be removed using a grout-removing tool, followed by a fresh application of new grout. Allow a week to cure, and then seal the grout with one of our Ceramica Grout Sealers then long-term maintenance will be very simple.

Sizes

Ceramica Heavy Duty Spray Degreaser comes in a 1L spray bottle and a handy 3.78 L refill size.
