

Product Description

Ceramica Grout Release puts an anti-bonding barrier between the grout and the surface of the tile making it much easier to wash off the excess grout from the surface.

Uses

Ceramica Grout Release is a high filming soap that is an excellent tool to assist the applicator when applying grout to rough, hard to clean or absorptive surfaces. Our new generation of difficult to grout slip-resistant tiles is another place where this product can substantially help the installer.

Application Instructions

Apply a thin even coat of this amber coloured liquid to the surface using a paintbrush, paint roller or a sponge. Allow the surface to dry for a minimum of 4 hours before applying the grout. The cleaning up process of applying grout will be made much easier when this material has been applied first.

Coverage

Approximately 75 to 150 sq.ft. per litre.

Sizes

Ceramica Grout Release comes in a 1L bottle, an economical 3.78L size and a commercial 18.93L pail.
