

## Product Description

Ceramica Grout Sealer protects grout joints from stains, dirt and mildew. Ceramica Grout Sealer is a high solids solvent-based acrylic sealer that comes in clear (9340) and 6 colours.

9341 White Sealer

9344 Ivory Sealer

9342 Bone Sealer

9345 Light Grey Sealer

9343 Beige Sealer

9346 Dark Grey Sealer

## Uses

Ceramica Grout Sealer that was designed to seal portland cement based ceramic tile grout. Ceramica 9340 dries to a clear transparent finish.

When applied to coloured grouts, a darkening of the grout will take place. If an even uniform colour is desired, we recommend using our coloured sealers instead of the clear.

## Application Instructions

Always-pre test in an inconspicuous area to insure product performance and satisfaction.

Always allow newly installed grout to cure for a minimum of a week before applying any grout sealer. Ceramica Grout Sealers are to be applied to the grout only, and not to the tile surface. This process is relatively easy and does go quite quickly. Apply the grout sealer using a small flat art brush. A #6 brush is for very narrow grout joints about 1/16 to 1/8 inch. The #8 brush is ideal for 1/8 to 3/16 inch wide joints. A #10 brush should be used for joint widths 3/16 to 1/4 inch. The #12 brush is best for joint widths in excess of 1/4 inch.

Apply a thin even coat of sealer to the grout moving the brush quite quickly. Complete an area about 2 feet by 2 feet square. After about 1 minute use a clean dry cloth and wipe directly over the grout surface removing any sealer that is on the edge of the tile or that did not soak into the grout. This put on then wipe off process will result in a joint that looks like grout, not paint.

## Coverage

Approximately 80 - 150 linear ft. per bottle depending on tile size and joint width.

## Sizes

Ceramica Grout Sealer comes in a 250ml bottle only.
