

Product Description

Ceramica Floor Finish Stripper provides an easy, odor free, and safe way of removing the dirty and worn floor finish coating before a new coat is put on.

Uses

Ceramica Floor Finish Stripper is specially formulated from powerful organic cleaners and detergents to remove wax coatings from stone surfaces without harming the stone or polish. Ceramica Floor Finish Stripper generally does not require harsh scrubbing to work; however, light scrubbing with a scouring pad or sponge is recommended.

Application Instructions

Add 500-750ml of Ceramica Floor Finish Stripper to 10 litres of warm water, and then apply this solution to the surface using a mop. Allow this liquid to remain on the surface for about 5 minutes. Agitate the surface with a scouring pad or sponge to assist the stripper in loosening all of the floor finish. Rinse the area thoroughly with hot water to remove the entire stripper and dissolved floor finish.

The stripped surface should not have any remaining shine. Repeat the application process on any isolated shiny areas that remain. Allow the floor to completely dry, before applying a fresh coat of our Ceramica 9400 Gloss Floor Finish.

Caution: Mild skin irritant, wear appropriate protective wear.

Product Features

- No strong fumes or odours.
- No harsh agitation required.
- Water-based formulation.
- Will not alter color or texture of stone surfaces.
- Rinses off easily and completely with water.
- Will not harm stone adhesives or grout

Sizes

Ceramica Floor Finish Stripper comes in a 1L bottle, an economical 3.78L size and a commercial 18.93L pail.
