

## Characteristics

Sure-foot Slip-Resistant Additive is a micronized polymer for addition to paints for slip resistance, fine texturing and gloss reduction. Due to its low oil absorption and high solvent resistance, it will stir easily into most oil-based and latex-based paints and other coatings with minimal effect on the coating's viscosity. Its low density allows it to stay well suspended in thin materials such as stains.

## Features

- Add to paints, stains, and sealers
- Add to latex-based, oil-based and epoxy coatings
- Spherical-shaped particles provide a smoother feel under foot when used on poll decks and patios.

## Benefits

- Slip resistance
- Easy addition into paints and stains
- Good chemical and abrasion resistance
- Good universal compatibility without viscosity effects.

## Limitations

Sure-foot Slip-Resistant Additive will increase the coefficient of friction on the surface of a paint, but due to its small particle size, the coating that this is added should be considered **slip-resistant but not non-skid**.

## Packaging

Sure-foot is packed in 1 lb. containers. Add ½ lb. per 5 gallons of sealer, paint or stain.

## Caution

Sure-foot Slip-Resistant Additive is not hazardous and does not contain silica, but should be treated as a nuisance dust while incorporating it into its intended vehicle.

It is recommended that when mixing into unfamiliar coatings, a small test batch and application be made.
