

General Description

Leak Seal is a granular material that, when wet, swells several times its original size, turns into a gel and creates a barrier which minimizes the seepage of fluid.

Uses

Leak Seal is used as an emergency sealer for leaks on flat roofs.

Limitations

Leak Seal is designed to be a temporary repair to stop roof leaks until weather conditions improve when a permanent repair can be made.

Application

Spread a layer about 1/2 inch thick over the suspected leak area which must be wet. Leak Seal particles will flow to and seal the trouble spot. Permanent roof repairs should be done when weather permits.

Packaging

7522, Leak Seal is available in 5 kg and 16 kg plastic snap top buckets.
